XM radio has become very popular among military personnell like myself. We travel quite often between our homes and military posts. XM allows us to find instant traffic and weather reports wherever we are, on demand while traveling, helping to ensure the safety of our soldiers on the homefront. This is a valuable tool that the National Association of Broadcasters should not lobby to block; moreover, should not attempt to impede the first ammendment rights that my colleagues and I have fought to protect, at the expense of our safety, and/or our lives. Please reject the NAB's petition 04-160.
